Security / DevOps

Wonde is the Stripe.com of school data! Developers use our simple API to access thousands of school records and build awesome applications that really help to drive better outcomes and improve students' lives. We want you to help us develop our next generation of features and products that will be used by the 16,000+ schools that we work with in the UK and the many more still to come as we explode into new territories.

If the thought of big data and millions of API calls excites you or you want to work on beautifully designed SPAs, then please keep reading!

We are looking for someone who can help us ensure that our infrastructure and security is top of the line. The successful candidate will be responsible for designing, building and maintaining our AWS infrastructure as we grow rapidly into new territories. The candidate will also help us meet our security goals by conducting internal penetration testing and auditing our security practices.

Technologies we use:

- NodeJS (our language of choice)
- MySQL databases (really big ones)
- Amazon Web Services
 - RDS
 - ECS
 - SNS
 - ElasticCache
 - Lambda
 - Step functions
 - Many more...
- PHP
- Terraform

Things an awesome candidate would have:

- Expertise with Amazon Web Services
- Expertise with infrastructure security
- Experience with NodeJS or PHP
- The desire to work in a startup atmosphere
- Great problem-solving skills
- A positive attitude to working with the latest technologies

Why work for us?

- A startup atmosphere where everyone's opinion is taken seriously
- A rapidly growing business with big plans and a global footprint
- An opportunity to learn new technologies from some very experienced developers that love to teach others

We are looking to meet candidates of different experiences; salary is subject to experience.
