

Frontend Developer

Philip Clifton

19th December, 2019

Wonde is the Stripe.com of school data! Developers use our simple API to access thousands of school records and build awesome applications that really help to drive better outcomes and improve students' lives. We want you to help us develop our next generation of features and products that will be used by the 14,000+ schools that we work with in the UK and the many more still to come as we explode into new territories.

If the thought of big data and millions of API calls excites you or you want to work on beautifully designed SPAs, then please keep reading!

Technologies we use:

- NodeJS (our language of choice)
- MySQL databases (really big ones)
- Amazon Web Services (from RDS to Lambda, we love tech!)
- PHP
- Redis
- Laravel

Things an awesome candidate would have:

- Proficiency in VueJS or other similar Javascript frameworks
- Proficiency with HTML and CSS.
- The desire to work in a startup atmosphere
- Problem-solving skills
- A positive attitude to working with the latest technologies
- An eye for design

Why work for us?

- A startup atmosphere where everyone's opinion is taken seriously
- A rapidly growing business with big plans
- An opportunity to learn new technologies from very experienced developers that love to help others
- Organised SCRUM workflow

We are looking to meet developers of different experiences; Salaries are subject to experience.
